

## Windsor Castle Park Walk

February 28, 2010

32-40 degrees F

Partly cloudy

Still early – good breeze by end of walk

6:45 to 11:30 A.M.

36 bird species observed

I also saw a ground hog in the woods and a raccoon in the marsh.

There were unidentified sparrows at the edge of the marsh inland. Also unidentified birds – maybe marsh wrens in the marsh grass inland.

Very little indication of spring other than maple trees beginning to bud and flower.

Great Blue Heron

Canada Goose

Double-crested

Cormorant
